

**Eva Ahlner, Principal Technical Officer,
Swedish Environmental Protection Agency, Sweden**

Eva Ahlner is currently working at the unit for Environmental Economics & Sustainable Production and Consumption at the Swedish Environmental Protection Agency. She has an educational background in chemical engineering and 15 years experience of research and environmental policy development on a national, European and international level.

Eva Ahlner has been extensively involved in the development of an Integrated Product Policy (IPP) nationally and within EU. She has been managing research programs towards a low-waste society and co-ordinated EU funded RTD projects on polymer recycling. As a Technical Attaché in Tokyo she has been analysing policy, research and business initiatives towards sustainable development in Japan for several Swedish governmental agencies and universities.

Her current work is focused on how to strengthen the product lifecycle perspective in the development of policy measures aiming to reach the Swedish Environmental Quality Objectives.
