**Gijsbert Korevaar, Programme Director, Industrial Ecology,
Delft University of Technology, The Netherlands**

Gijsbert Korevaar is director of the research and education programme on Industrial Ecology, an integrated joint initiative by Delft University of Technology and Leiden University. Gijsbert Korevaar studied chemical engineering and obtained his PhD degree on the development of design methodologies for sustainable process and product design at Delft University of Technology in 2004. As assistant professor at Delft University of Technology, he teaches classes on Industrial Ecology, Sustainable Design, and Process Engineering at both bachelor and master level. His research is mainly on the implementation of the Industrial Ecology concepts and toolbox into industrial applications and the development of innovative and sustainable business strategies and production methods.
