

**Garrette Clark, Programme Officer, Business and Industry Unit,  
United Nations Environment Programme, France**

Garrette Clark is a Programme Officer with the Business and Industry Unit in the Sustainable Consumption and Production Branch of the Division of Industry, Technology and Economics at UNEP. Her expertise lies in cleaner production, sustainable product development and business outreach.

Garrette is managing the 3 year EC supported Resource Efficiency and Eco-Innovation in Developing and Transition Countries project. This 4 million euro project, which targets developing countries, will build on national resource efficiency capacities and enhance them to cover eco-innovation capacity building - in technical and policy terms. She has worked with the joint UNIDO UNEP National Cleaner Production Centres (NCPCs) Programme and leads capacity building in cleaner production related topics including cleaner production and design for sustainability. In the area of Design for Sustainability (D4S), she has authored and produced publications for NCPCs and on Product Services Systems. Within the EC project a key policy link will be with sustainable public procurement efforts - the key being that no matter how 'sustainable' a product is – it doesn't make a difference if no one buys it.

Previous to working with UNEP, Garrette worked in the United States Environmental Protection Agency. She has a Masters in Public Policy from University of California.
